

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. VOL. XXXII.

"EVERY MAN IS A VALUABLE MEMBER OF SOCIETY WHO BY HIS OBSERVATIONS, RESEARCHES,
AND EXPERIMENTS PROCURES KNOWLEDGE FOR MEN."—SMITHSON.

WASHINGTON:
PUBLISHED BY THE SMITHSONIAN INSTITUTION.
1888.

ADVERTISEMENT.

The present series, entitled "Smithsonian Miscellaneous Collections," is intended to embrace all the publications issued directly by the Smithsonian Institution in octavo form; those in quarto constituting the "Smithsonian Contributions to Knowledge." The quarto series includes memoirs, embracing the records of extended original investigations and researches, resulting in what are believed to be new truths, and constituting positive additions to the sum of human knowledge. The octavo series is designed to contain reports on the present state of our knowledge of particular branches of science; instructions for collecting and digesting facts and materials for research; lists and synopses of species of the organic and inorganic world; museum catalogues; reports of explorations; aids to bibliographical investigations, etc., generally prepared at the express request of the Institution, and at its expense.

In the Smithsonian Contributions to Knowledge, as well as in the present series, each article is separately paged and indexed, and the actual date of its publication is that given on its special title page, and not that of the volume in which it is placed. In many cases works have been published and largely distributed, years before their combination into volumes.

INTRODUCTION.

Early in 1872 I submitted to the Secretary of the Smithsonian Institution, the late Joseph Henry, a manuscript entitled "A Table of Specific Gravities, Boiling Points, and Melting Points for Solids and Liquids." It was accepted for publication, and in February, 1874, the printed copies were ready for distribution. For years previously Professor Henry had had in mind the publication of a series of similar tables somewhat upon the plan now before suggested by Babbage, and accordingly my modest work was given the somewhat ambitious title of "The Constants of Nature" and made the first part of the proposed undertaking. Subsequently Parts II, III, and V were furnished by myself and Part IV by Professor G. F. Becker, and in 1876 I also published a supplement to Part I.

The following tables form, in effect, a new edition of Part I, completely revised, rearranged, and brought down as nearly as possible to the date of printing. They are, however, modified by the omission of boiling and melting points, except when such data seemed essential to the proper identification of a compound, on the ground that the magnificent tables of Professor Carnelley already supply that want. I have limited myself to specific gravity alone, following in the main the plan of arrangement adopted in my earlier work, with such changes as were made necessary by the later developements of chemical thought. Constitutional formulæ have been used, not according to any fixed rule, but according to convenience, and their adoption has been governed, to some extent, by the limitations of the octavo page. All other details have been subject to the same limitations, and it is hoped that their absence will be compensated for by the almost uniformly full references to literature. Some data could not be traced back to their original sources, at least not without unwarrantable labor, and most of these formed part of an early table prepared nearly twenty years ago for my own private use. A few determinations are accredited to standard works of reference, such as Watts' Dictionary, Dana's Mineralogy, and the like, and many have been drawn from the Jahresbericht. Absolute completeness cannot, of course, be claimed, and in some directions it has not

even been attempted. Among minerals, only those having approximately definite formulæ are given, and indefinite substances have been excluded altogether. The tables aim at reasonable completeness only as regards *artificial substances of definite constitution*, and all else is gratuitous. A good many determinations of specific gravity have been unearthed from doctoral dissertations, school programmes, and similar foes of the bibliographer, and doubtless other data so printed have escaped my notice altogether. There is a weakness of human nature which, masquerading as patriotism, sometimes leads men of science to bury valuable researches in obscure local publications, and a compiler may never flatter himself that no such paper has eluded his vigilance. I shall be glad to receive notice of all omissions, and will try to rectify such or other errors in future supplements or appendices.

A word in conclusion as to the extent of the table. They contain the specific gravities of 5,227 distinct substances and 14,465 separate determinations. The original edition gave only 2,263 substances, to which nearly 700 were added in the supplement. The increase is a noteworthy indication of existing chemical activity.

F. W. CLARKE.

EXPLANATORY NOTES.

In references to literature the following abbreviations have been used. In each case, as far as practicable, series, volume, and page are indicated, the page reference signifying, according to circumstances, either the first page of the paper cited, or else the actual page upon which the determination is given. The former rule applies to pages containing many data; the latter to cases in which the specific gravity datum is merely incidental.

* For sp. gr. of silicates before and after fusion see v. Kobell, Bei. 6, 314.

NOTE.—As regards the natural silicates this table is far from complete. Only those compounds are included which admit of fairly definite chemical formulation, and only a few typical determinations of specific gravity are given in each case. Furthermore, the arrangement is absolutely chemical, and is in no sense dependent upon mineralogical considerations. Thus, for example, all the magnesium silicates are brought together; and so also are the numerous double silicates of aluminum and calcium, quite regardless of their classification as mineral species. Many micas, chlorites, scapolites, etc., are omitted altogether; but the omissions are not serious, for all the important data have been many times collected in the larger treatises on mineralogy, and are, therefore, easily accessible.

* This table contains only a moderate number of the many determinations which have been made relative to the specific gravity of alloys. Only those alloys have been admitted which allow of relatively simple chemical formulæ. Some of them are doubtless true chemical compounds, but in most cases the formulæ merely represent proportionate composition.

INDEX
TO THE
LITERATURE
OF THE
SPECTROSCOPE.

WASHINGTON:
PUBLISHED BY THE SMITHSONIAN INSTITUTION.
1888.

PRINTED AND STEREOTYPED BY

JUDD & DETWEILER,

AT WASHINGTON, D. C.

ADVERTISEMENT.

With the rapid accumulation of scientific memoirs and discussions, published from year to year in numerous journals and society proceedings, a constantly larger expenditure of time and labor is required by both the investigator and the student, to learn the sources of information and the condition of discovery in any given field. Hence is felt the growing need of classified indexes to the work done in the various fields of research, and hence the corresponding tendency of the age to supply such demand.

The present work aims at a general survey of Spectroscopic Literature, with references to authorities in its more special subdivisions, and it has been prepared for the Institution by Mr. Tuckerman, without other remuneration than the expectation of serving the interests of scientific inquirers.

It has been brought down to the middle of the year 1887.

S. P. LANGLEY,
Secretary Smithsonian Institution.

WASHINGTON, *February*, 1888.

PREFACE.

This work is intended to be a list of all the books and smaller treatises, especially contributions to scientific periodicals, on the spectroscope and spectrum analysis from the beginning of our knowledge upon the subject until July, 1887; an Index or Bibliography of the Spectroscope and Spectrum Analysis.

It was begun at the suggestion of Dr. Wolcott Gibbs, whose work in connection with the subject is well known.

The object is to enable a chemist to find out at a glance all that has been published in any branch of his subject where the spectroscope is used, and what every writer has published.

The method pursued has been as follows: 1, to examine the bibliographies, booksellers' catalogues, and books on spectrum analysis for books; 2, to examine the scientific periodicals for the shorter treatises, the first and original contributions to the subject, and this was done volume by volume wherever there was no index to a series of years—as in the *Comptes Rendus* and the later volumes of the *Annales de Chimie et de Physique* and of (Poggendorff's, now Wiedemann's) *Annalen der Physik und Chemie*, as well as others. Use was made of the bibliography at the end of Roscoe's *Spectrum Analysis*, and in the reports of the British Association for 1881 and 1884, for such books and articles as the author could not find elsewhere. Credit is also due to the Astor Library and its managers for the means it afforded the author of making this Index.

After the greater part of the material was collected it was divided into such subjects as the titles indicated, in alphabetical order, easy finding being constantly kept in view. Titles have often been repeated more than once so as to make sure of their being found. Finally, at the suggestion of the Smithsonian Institution, the List of Authors was added.

The author hopes that his two objects, fullness and ready access of all the titles, will prove to have been gained.

NEW YORK, 1887.

LITERATURE OF THE SPECTROSCOPE.

HISTORY.

Arago (Domenique François Jean), 1786–1853. Œuvres complètes, avec Tables, publiées d'après son ordre sous la direction de J. A. Barral. Paris et Leipzig, 1854–'62, 17 vols., ill., 8°.

(Interesting here only in connection with polarized light.)

Barlocci.

(Wrote on the influence of white light.)

Beccaria, 1716–81.

(Wrote on the refraction of rock crystal, about 1750; see Ency. Brit., eighth edition I, 758.)

Becker (G. F.). Contribution to the History of Spectrum Analysis.

Amer. Jour. Sci., (3) **16**, 392.

Bérard. Mem. de la Soc. d'Arcueil, 3 (1817); and Biot's *Traité de Physique*, **4**, 600–18, 673–4.

(A full account of Bérard's experiments on the calorific rays of the spectrum.)

Berthold (G.). Zur Geschichte der Fluorescenz.

Ann. Phys., u. Chem., **158**, 623.

Biot (J. B.). *Traité de Physique expérimentale et mathématique*. Paris, 1816, 4 vols., 8°.

——— — —. Mémoire sur les Lois générales de la double Réfraction et de la Polarization dans les Corps cristallisés. Paris, 1819, 4°.

——— — —. Mémoire sur la Polarization circulaire. Paris, 1832, 4°

——— — —. Mémoire sur la Polarization lamellaire. Paris, 1842, 4°.

Blair (Dr. Robert), 1787–1829. Edinburgh Transactions, III, 3.

(He discovered the uses of muriatic acid mixed with antimony in correcting secondary spectra in telescopes.)

Boscovich (Roger Joseph). *Opuscula*. Bassano, 1784, 5 vols., 4°. *Opera pertinentia ad Opticam et Astronomiam* (Astor Library).

Ency. Brit., eighth edition, I, 721-2, 753.

(He made a delicate micrometer with double refraction, about 1777, and observed the so-called Secondary Spectrum, consisting of purple and green light.)

Bouguer (Pierre), 1698-1758. *Essai d'Optique, sur la Gradation de la Lumière*. Paris, 1729, 8°; ed. La Caille, Paris, 1760, 4°.

Ency. Brit., eighth edition, I, 753-4.

(He published a number of treatises on the gradation of light.)

Brewster (Sir David), 1781-1868. *Treatise on Optics*. Edinburgh, 1831. *New Analysis of Solar Light*, indicating three primary colours, forming coincident spectra of equal length. Edinburgh, 1834.

(See Life of B. by Mrs. Gordon.)

Buffon.

In his "*Epoques de la Nature*" he describes light and heat as known in his times.)

Delaunay. *Notice sur la Constitution de l'Univers*. Première Partie: *Analyse Spectrale*, *Annuaire du Bureau des Longitudes*, 1869, Paris, 8°.

(A masterly treatise on the subject at that time.)

Desains (P.), *Recherches expérimentales sur les anneaux colorés de Newton*. *Comptes Rendus*, **78**, 219-21; *Phil. Mag.* (4) **47**, 236-7.

Dolland (John), 1706-61. See *Proc. Royal Soc.*, **50** (1757) 733, and *Ency. Brit.*, eighth edition, I, 749-51.

(He discovered that dispersion depends not on the mean refraction but on the constitution of the diaphanous medium.)

Draper (Henry). *Obituary* by G. F. Barker in *Amer. Jour. Sci.* (3) **25**, 89.

Draper (J. W.). *Early Contributions to Spectrum Photography*. *Nature*, **10**, 243-4.

Dutirou (l'abbé). *Memoire sur la détermination des indices de réfraction des sept raies de Fraunhofer dans une série nombreuse de verres*.

Annales de Chimie et de Physique, (3) **28** (1850) 176.

Exner (K.). *Die Fraunhofer'schen Ringe, die Quetelet'schen Streifen und verwandte Erscheinungen*.

SUPPLEMENT.

As the omission of the authors' names in connection with references to the *Jahresberichte der Chemie* has been pointed out as a serious defect in the Index, these names are now supplied below.

- Jahresber. d. Chemie* (1847-'8), 161, analysis, by Draper.
- “ “ (1847-'8), 164, analysis, by Becquerel.
- “ “ (1847-'8), 197, analysis, by Brewster.
- “ “ (1847-'8), 197, analysis, by Airy.
- “ “ (1847-'8), 198, analysis, by Melloni.
- “ “ (1847-'8), 198, analysis, by Brewster.
- “ “ (1847-'8), 221, chlorine and hydrogen, by Favre and Silbermann.
- “ “ (1849), 164, photography of, by Becquerel.
- “ “ (1850), 154, lines in the sp., by Brewster.
- “ “ (1851), 151, longitudinal lines, by Ragona-Scinà.
- “ “ (1851), 134; (1852), 117, interference sp., both by Nobert.
- “ “ (1851), 152, Fraunhofer lines, by Broch.
- “ “ (1851), 152, electric sp., by Masson.
- “ “ (1852), 124, Fraunhofer lines, by Phillips and by Merz.
- “ “ (1852), 125, analysis, by Stokes.
- “ “ (1852), 125, longitudinal lines, by Zantedeschi.
- “ “ (1852), 126, measurements of the sp., by Porro.
- “ “ (1852), 126, 131, analysis, by Helmholtz.
- “ “ (1853), 167, Fraunhofer lines, by Kuhn.
- “ “ (1853), 167, Longitudinal lines, by Salm-Horstmar.
- “ “ (1853), 178, colors, by Grassmann.
- “ “ (1854), 137, Fraunhofer lines, by Heusser.
- “ “ (1854), 197, solar sp. in general, by Becquerel.
- “ “ (1855), 123, analysis, by Helmholtz.
- “ “ (1855), 123, lines of the sp., by Grassmann.

- Jahresber. d. Chemie** (1859), 643, analysis, by Kirchhoff and Bunsen.
- “ “ (1860), 598, analysis, by Kirchhoff and Bunsen.
- “ “ (1860), 608, analysis, by Merz.
- “ “ (1861), 41, analysis, by Kirchhoff and Bunsen.
- “ “ (1861), 43, electric, by W. A. Miller.
- “ “ (1861), 44, phosphorus and sulphur, by Seguin.
- “ “ (1861), 44, thallium, by Crookes.
- “ “ (1861), 44, dark lines, by Kirchhoff.
- “ “ (1861), 45, solar atmosphere, by Tyndall and Roscoe.
- “ “ (1861), 45, analysis, by Kirchhoff and Bunsen.
- “ “ (1862), 26, Fraunhofer lines at sunset, by A. Weiss.
- “ “ (1862), 26, cause of the dark lines in the solar sp., by Janssen.
- “ “ (1862), 26, dark lines in the sp. of stars, by Merz.
- “ “ (1862), 27, coincidence of the Fraunhofer lines with those of various metals, by Angström.
- “ “ (1862), 27, general treatises on spectrum analysis, by Jamin, W. A. Miller, and Roscoe.
- “ “ (1862), 27, various forms of the spectroscope, by Janssen, Kirchhoff and Bunsen, A. Waugh, E. Hauer, and O. N. Rood.
- “ “ (1862), 27, 28, methods for obtaining constant spectra, by Mitscherlich, Crookes, Diacon et Wolf, Debray, Roscoe and Clifton, and Plücker.
- “ “ (1862), 29, spectrum of soda, by Fizeau.
- “ “ (1862), 29, division of bright rays into metallic spectra in good spectroscopes, by J. P. Cooke.
- “ “ (1862), 29, influence of the temperature of a flame on the spectrum produced by it, by Kirchhoff and Bunsen, Roscoe and Clifton, and Crookes.
- “ “ (1862), 30, constancy of the spectra, both of metals and of their compounds, by Wolf et Diacon.
- “ “ (1862), 31, differences between the spectra of various metals and those of their chlorine compounds, especially the influence of salts by Mitscherlich.
- “ “ (1862), 32, the spectrum of the solar atmosphere and its composition, by Kirchhoff and Bunsen.

- Jahresber. d. Chemie (1862), 33, metallic spectra produced by electric sparks, by W. A. Miller, Stokes, and T. R. Robinson.
- “ “ (1862), 33, spectra of carbon and of fluorine, by Sequin, Attfield, and Swan.
- “ “ (1862), 34, violet coloring given to the flame by various chlorides, by Gladstone.
- “ “ (1862), 34, spectra of colored solutions, by Brewster, Gladstone, and by Rood.
- “ “ (1862), 29, spectrum of sodium, by Wolf et Diacon.
- “ “ (1862), 30, spectrum of lithium in the hydrogen flame, by Wolf et Diacon.
- “ “ (1862), 30, spectra of copper and of lead, by Debray.
- “ “ (1862), 535, spectrum of blood, by F. Hoppe.
- “ “ (1863), 101, photography of the solar spectrum, by Mascart.
- “ “ (1863), 104, 106, 107, photographic effect of electric spectra of metals, by W. A. Miller.
- “ “ (1863), 107, 110, dark lines in the solar spectrum, by Kirchhoff.
- “ “ (1863), 108, note, atmospheric or telluric lines of the solar spectrum, by Jassen.
- “ “ (1863), 108, note, spectra of the stars, by Secchi.
- “ “ (1863), 109, spectrum of iodine, by A. Wüllner.
